in this book jonathan h turner combines sociology evolutionary biology cladistic analysis from biology and comparative neuroanatomy to examine human nature as inherited from common ancestors shared by humans and present day great apes selection pressures altered this inherited legacy for the ancestors of humans termed hominins for being bipedal and forced greater organization than extant great apes when the hominins moved into open country terrestrial habitats the effects of these selection pressures increased hominin ancestors emotional capacities through greater social and group orientation this shift in turn enabled further selection for a larger brain articulated speech and culture along the human line turner elaborates human nature as a series of overlapping complexes that are the outcome of the inherited legacy of great apes being fed through the transforming effects of a larger brain speech and culture these complexes he shows can be understood as the cognitive complex the psychological complex the emotions complex the interaction complex and the community complex

provocative and richly textured schwartz s analyses of the inadequacies of contemporary scientific views of human nature are compelling but the consequences are even more worthy of note los angeles times out of the investigations and speculations of contemporary science a challenging view of human behavior and society has emerged and gained strength it is a view that equates human nature utterly and unalterably with the pursuit of self interest influenced by this view people increasingly appeal to natural imperatives instead of moral ones to explain and justify their actions and those of others

recent empirical and philosophical research into the evolutionary history of homo sapiens the origins of the mind brain and the development of human culture has sparked heated debates about what it means to be human and how knowledge about humans from the sciences and humanities should be understood conversations on human nature featuring 20 interviews with leading scholars in biology psychology anthropology philosophy and theology brings these debates to life for teachers students and general readers the book outlines the basic scientific philosophical and theological issues involved in understanding human nature organizes material

from the various disciplines under four broad headings 1 evolution brains and human nature 2 biocultural human nature 3 persons minds and human nature 4 religion theology and human nature concludes with fuentes and visala s discussion of what re into human nature agree on what they disagree on and what we need to learn to resolve those differences

unpopular in its day david hume s sprawling three volume a treatise of human nature 1739 40 has withstood the test of time and had enormous impact on subsequent philosophical thought hume s comprehensive effort to form an observationally grounded study of human nature employs john locke s empiric principles to construct a theory of knowledge from which to evaluate metaphysical ideas a key to modern studies of eighteenth century western philosophy the treatise considers numerous classic philosophical issues including causation existence freedom and necessity and morality unabridged republication of the edition originally published by oxford at the clarendon press london 1888

looks at the major schools of psychology and considers the claims or assumptions being made about human nature and their position on the associated issues of consciousness the self the body other people and the physical world

this book explores the idea of human nature and the many understandings of it put forward by such diverse figures as aristotle rousseau marx freud darwin and e o wilson each chapter looks at a different theory and offers a concise explanation assessing the theory s plausibility without forcing it into a mould some chapters deal with the ideas of only one thinker while others such as the chapters on liberalism and feminism present a variety of different positions a clear distinction is made between theories of human nature and the political theories which so often follow from them for the new edition loptson has addressed the new developments in the rapidly expanding genetic and paleontological record as well as expanded the discussion of the christian theory of human nature by incorporating the ideas of the marx scholar and social theorist g a cohen the new edition has also been substantively revised and updated throughout

winner of the international business book award 2019 from the million copy bestselling author of the 48 laws of power robert greene is a master guide for millions of readers distilling ancient wisdom and philosophy into essential texts for seekers of power understanding and mastery now he turns to the most important subject of all understanding people s drives and motivations even when they are unconscious of them themselves we are social animals our very lives depend on our relationships with people knowing why people do what they do is the most important tool we can possess without which our other talents can only take us so far drawing from the ideas and examples of pericles queen elizabeth i martin luther king jr and many others greene teaches us how to detach ourselves from our own emotions and master self control how to develop the empathy that leads to insight how to look behind people s masks and how to resist conformity to develop your singular sense of purpose whether at work in relationships or in shaping the world around you the laws of human nature offers brilliant tactics for success self improvement and self defence

our views on human nature are fundamental to the whole development indeed the whole future of human society originally published in 1974 professor thorpe believed that this was one of the most important and significant topics to which a biologist can address himself and in this book he attempts a synthetic view of the nature of man and animal based on the five disciplines of physiology ethology genetics psychology and philosophy in a masterly survey of the natural order he shows the animal world as part of yet distinct from the inanimate world he then treats aspects of the animal world which approach the human world in behaviour and capabilities examining simple organisms communications in vertebrates and invertebrates innate behaviour versus acquired behaviour and animal perception in the second part of the book he deals with those aspects of human nature for which there is no analogy and which constitute man s uniqueness his consciousness of his past his awareness of his future and his desire to understand the meaning of his existence the primary facts which demonstrate the importance of this book arise from the ever growing power of man over his environment and his apparent inability to foresee and cope with the dangers of uncontrolled population growth on the one hand and the wildly irrational waste and degradation of the natural resources of the world on the other professor thorpe believes that

an immense responsibility lies with literate men of good will particularly scientists to convince man that he is the spearhead and custodian of a stupendous evolutionary process animal nature and human nature integrates scientific fact with sound theological thought in an attempt to fulfil in a manner previously impossible pascal s injunction that it is dangerous to show man too clearly how much he resembles the beast without at the same time showing him his greatness it is also dangerous to allow him too clear a vision of his greatness without his baseness it is even more dangerous to leave him in ignorance of both but it is very profitable to show him both

the notion of human nature is often called upon to carry the burden of a great number of arguments i all men we are told are motivated to action by the same basic desires needs instincts drives unity is given to a great variety of himian behaviour if we see them as emanating from a single source ii given that human nature is what it is then social institutions and political organisations ought to be such and such human nature is the one unchangeable constant in a varying social system iii given that human nature describes certain basic and common needs then the good man is a man that has had these needs satisfied just as a good plant is

one that has had its needs satisfied good and bad are determined in terms of the basic human requirements theories of human nature therefore have powerful consequences it is important that one should be clear about what exactly is involved in this notion of a human nature statements that assert something about the nature or essence of man are by no means restricted to philosophers we have on the one hand the traditional and largely speculative claims of plato hobbes and rousseau but we have also the more scientific claims of psychologists freud maslow fromm and anthropologists lorenz ardrey morris psychologists and anthropologists claim new insights for why we do the things that we do they give explanations of human behaviour in terms of general and basic laws these generalisations turn out to be descriptions of human nature i argue that the scientific enterprise of formulating such general laws for the purpose of explaining human action is radically misconceived how does the human nature theorist arrive at his theory that is how is one supposed to make this discovery about a human essence what do we look for where do we look for it and how do we go about discovering it these are important questions that need to be asked of both the psychologist and the anthropologist they will lead us to both a clearer understanding of the kind of argument involved in their claims and will also bring to the forefront the underlying assumptions in their position human nature theorists employ a number of terms that seem to be essential to the theories terms like desire need drive and instinct function as primary elements because any formulation of a general law that purports to have explanatory force with regards to human behaviour must employ terms that are generally and ordinarily employed to explain particular actions explanation of human behaviour by reference to the general law achieves a certain plausibility by giving the impression of doing what we ordinarily do when we explain another's behaviour while at the same time claiming scientific status for the explanation concentrating therefore in particular on the psychologist's use of need viz maslow all men need love and the anthropologist's use of instinct viz ardrey and morris all men are born with the instinct for aggression i attempt to show that these scientific explanations of human behaviour are incoherent for they depend on the ordinary use of these terms to achieve plausibility while at the same time they depend on a scientific use to legitimise their conclusions

preface the author of this very practical treatise on scotch loch fishing desires clearly that it may be of use to all who had it he

does not pretend to have written anything new but to have attempted to put what he has to say in as readable a form as possible everything in the way of the history and habits of fish has been studiously avoided and technicalities have been used as sparingly as possible the writing of this book has afforded him pleasure in his leisure moments and that pleasure would be much increased if he knew that the perusal of it would create any bond of sympathy between himself and the angling community in general this section is interleaved with blank sheets for the readers notes the author need hardly say that any suggestions addressed to the case of the publishers will meet with consideration in a future edition we do not pretend to write or enlarge upon a new subject much has been said and written and well said and written too on the art of fishing but loch fishing has been rather looked upon as a second rate performance and to dispel this idea is one of the objects for which this present treatise has been written far be it from us to say anything against fishing lawfully practised in any form but many pent up in our large towns will bear us out when we say that on the whole a days loch fishing is the most convenient one great matter is that the loch fisher is dependent on nothing but enough wind to curl the water and on a large loch it is very seldom that a dead calm prevails all day and can make his arrangements for a day weeks beforehand whereas the stream fisher is dependent for a good take on the state of the water and however pleasant and easy it may be for one living near the banks of a good trout stream or river it is quite another matter to arrange for a days river fishing if one is looking forward to a holiday at a date some weeks ahead providence may favour the expectant angler with a good day and the water in order but experience has taught most of us that the good days are in the minority and that as is the case with our rapid running streams such as many of our northern streams are the water is either too large or too small unless as previously remarked you live near at hand and can catch it at its best a common belief in regard to loch fishing is that the tyro and the experienced angler have nearly the same chance in fishing the one from the stern and the other from the bow of the same boat of all the absurd beliefs as to loch fishing this is one of the most absurd try it give the tyro either end of the boat he likes give him a cast of ally flies he may fancy or even a cast similar to those which a crack may be using and if he catches one for every three the other has he may consider himself very lucky of course there are lochs where the fish are not abundant and a beginner may come across as many as an older fisher but we speak of lochs where there are fish to be caught and where each has a fair chance

again it is said that the boatman has as much to do with catching trout in a loch as the angler well we dont deny that in an untried loch it is necessary to have the guidance of a good boatman but the same argument holds good as to stream fishing

each chapter observes the nature of human beings through several different lenses the development of the human being through inherited tendencies ingrained habits and environmental factors in life all receive due consideration later on in the text are a series of mental tests whereby pyle observes differences between males and females in terms of vocabulary and memory like several texts of its era this book stands out for its philosophical roots the discussion of psychological topics finely balances theoretical conjecture with practical tests and observations a superb text for those wishing to gain an understanding of mental functioning and human behaviour as well as an important milestone in the history of psychology the science of human nature continues to hold steady popularity to this day particularly among avid enthusiasts and students of psychology together with licensed and practicing professionals in the field

this book which is in its second edition provides a provocative mirror from which to discern more clearly one's own assumptions about human nature i found myself reflecting on the subject matter and its impact on my own life including relationships teaching research and therapy the author has done a superb job of raising our consciousness about human nature in this book an i strongly recommend it to academic and applied psychologists if you need an invitation to examine your views about human nature this book is it c r snyder university of kansas lawrence in general are people trustworthy or unreliable altruistic or selfish are they simple and easy to understand or complex and beyond comprehension our assumptions about human nature color everything from the way we bargain with a used car dealer to our expectations about further conflict in the middle east because our assumptions about human nature underlie our reactions to specific events wrightsman designed this second edition to enhance our understanding of human nature the relationship of attitudes to behavior the unidimensionality of attitudes and the influence of social movements on beliefs psychologists social workers researchers and students will find assumptions about human nature an illuminating exploration into the philosophies of human nature
